Nearly 9 out of 10 Minnesota homes are smoke free. Is yours?

Unlock the Door to a Smoke-Free Apartment

Secondhand smoke in an apartment building can easily drift into neighboring apartments putting family, friends, pets, and staff at risk.

3 Things all Minnesota renters should know about secondhand smoke

1. A smoke-free building is a HEALTHIER building
   - There is no safe level of exposure to secondhand smoke.
   - Secondhand smoke contains more than 7,000 chemicals and more than 70 of them can cause cancer.

2. A smoke-free building is a CLEANER building
   - Smoking indoors can cause sticky residue build-up, strong odor, and burn marks.
   - Smoke-filled air travels easily throughout an apartment building, flowing into neighboring units and common areas.

3. A smoke-free building is a SAFER building
   - Cigarette fires are a leading cause of fire-related death in apartment buildings.
   - Smoking-related fires in apartment buildings are 100% preventable.
