

Nearly 9 out of 10 Minnesota homes are smoke free.

Is yours?

Unlock the Door to a Smoke-Free Apartment

Secondhand smoke in an apartment building can easily drift into neighboring apartments putting family, friends, pets, and staff at risk.

3 Things all Minnesota renters should know about secondhand smoke

A smoke-free building is a HEALTHIER building

There is no safe level of exposure to secondhand smoke.

Secondhand smoke contains more than 7,000 chemicals and more than 70 of them can cause cancer.

A smoke-free building is a CLEANER building

Smoking indoors can cause sticky residue build-up, strong odor, and burn marks.

Smoke-filled air travels easily throughout an apartment building, flowing into neighboring units and common areas.

A smoke-free building is a SAFER building

Cigarette fires are a leading cause of fire-related death in apartment buildings.

Smoking-related fires in apartment buildings are 100% preventable.
